Licence Guard / Code Scrambler

LICENCE GUARD

The products you create and sell deserve to be licenced. Your principals should insist on protecting your revenue stream and obtaining additional sales with increased user counts.

Licence Guard puts you in control.

CODE SCRAMBLER

Code Scrambler allows you to protect your intellectual property without breaking out of Dynamics AX.

The code itself will be obfuscated but crucially will still be compilable X++ AX code.

COMBINED

Licence Guard and Code Scrambler, when combined are a powerful tool to leverage in the development and deployment of your key intellectual property to your customers.

- Protect Strategic Intellectual Property
- Formalise Licence Revenue Streams
- Self Managed, sign your own products
- Anti Tamper Mechanisms built in
- 100% Native AX Solution producing only X++ code

Any licensing module for the extensible ERP solution that constitutes Dynamics AX must provide a hub to manage licensing for both Microsoft and it's value added partners.

To date it has been impossible for 3rd parties wishing to manage licensing for 3rd party content effectively.

Licence Guard changes this by providing a framework that allows 3rd parties to licence their products side by side with Microsoft and other 3rd Parties.

Licence Guard has anti tamper mechanisms and provides flexible handling of your licensing requirements.

- Perhaps you want a Demo version?
- Maybe a product release that reduces features available if the licence is allowed to expire?
- Or you want a tiered product controlled by licence code rather than managing multiple product streams?

Code Scrambler allows you to protect your intellectual property within Dynamics AX.

Is there anything in your product that you see as a key differentiator between you and your competition that you would not want readily exposed or plagiarised?

Code Scrambler will provide the protection you need.

Code Scrambler is a native AX application and it's sole role is to obfuscate X++ code.   This is achieved by utilising a multitude of techniques that are randomly applied according to a few simple user selected parameters.

Code Scrambler is a very powerful toolset that generates obfuscated code that behaves EXACTLY as your original code.
